ASPIRING WEB & APP DEVELOPER | FREELANCE GRAPHIC DESIGNER

BSIT student passionate about building dynamic, user-friendly web and mobile applications. Continuously learning modern technologies and frameworks. Experienced in creating YouTube thumbnails, posters, and textures as a freelance graphic designer.

EXPERIENCE

UI, Front-End, and Backend Support | NUtify App

- Contributed to both design and development aspects
- Designed the app icon, and assisted with both frontend and backend functionality.

Frontend Developer | Washette Laundromat

- Developed the front-end of the official website using a clean, glassmorphism UI.

CERTIFICATIONS

- IC3 GS6 Level 1 Certification - Certiport
- GitHub Foundations - GitHub
- HTML Fundamentals - CodeCred
- CSS Mastery - CodeCred
- Bootstrap Essentials - CodeCred
- SQL Fundamentals - CodeCred

PROJECTS

NUtify

NUtify is our App Development project, an app designed for seamless communication between students and professors. It features real time notifications for consultation requests and important academic updates, making school coordination smoother and more efficient. I contributed by designing the icon of the app, helping configure Firebase, assisting with backend management, and working on various other components of the app.

Stridencount

Stridencount is our OOP project, an easy-to-use app that tracks steps, calories burned, and distance traveled. It helps users monitor their fitness progress while showcasing our understanding of object-oriented programming concepts. I contributed to various aspects of the project, helping with functionality and ensuring a smooth user experience.

Website for Washette Laundromat

Developed the official website of Washette Laundromat as part of a group project for our Web Systems and Database Systems finals. The site allows customers to check their laundry order status online and helps staff manage customer records efficiently. I focused on front-end development, using a clean, minimal layout with a modern glassmorphism design to ensure a user-friendly experience across devices.

Website for Pearl Oasis

Designed and developed the official website for Pearl Oasis, incorporating a modern user interface, interactive online store, and dynamic animations. The project highlights my skills in front-end development, UI design, and creating engaging web experiences with smooth visual elements.

Mineview

A small web based tool that allows users to view Minecraft player profiles for both Java Edition and Bedrock Edition. It fetches player information such as username, UUID/XUID, and view of their skin. Users can also download the skin directly.

Minewatch

A small web tool that checks and displays the status of Minecraft servers in real-time.
